The CDC Environmental Public Health Tracking 2006 Conference (TRACKS 2006)
"Implementing the Tracking Network". Atlanta, GA. Aug. 9-11, 2006

- **HELIX-Atlanta was developed to support current and future state and local EPHT programs to implement data linking demonstration projects which could be part of the EPHT Network.**
- **HELIX-Atlanta is a pilot linking project in Atlanta for CDC to learn about the challenges the states will encounter.**
- **NASA/MSFC and the CDC are partners in linking environmental and health data to enhance public health surveillance.**
- **The use of NASA technology creates value – added geospatial products from existing environmental data sources to facilitate public health linkages.**
- **Proving the feasibility of the approach is the main objective**

HELIX-Atlanta Challenges

- **Sharing data between agencies with different missions and mindsets**
- **Protecting confidentiality of information**
- **Ensuring high quality geocoded data**
- **Ensuring appropriate spatial and temporal resolutions of environmental data**
- **Developing sound resources and methods for conducting data linkages and data analysis**

HELIX-Atlanta Respiratory Health Team

RH Team Pilot Data Linkage Project:

Link environmental data related to ground-level PM_{2.5} (NASA+EPA) with health data related to asthma

Goals:

1. Produce and share information on methods useful for integrating and analyzing data on asthma and PM_{2.5} for environmental public health surveillance.
2. Generate information and recommendations valuable to sustaining surveillance of asthma with PM_{2.5} in the Metro-Atlanta area.

Environmental Hazard Measure: Daily PM_{2.5}

Asthma Measure: Daily acute asthma office visits to KP-GA Medical Facilities

Time period: 2001-2003

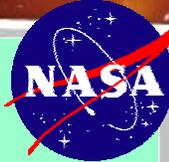

Linkage Domain: 5-county metropolitan Atlanta

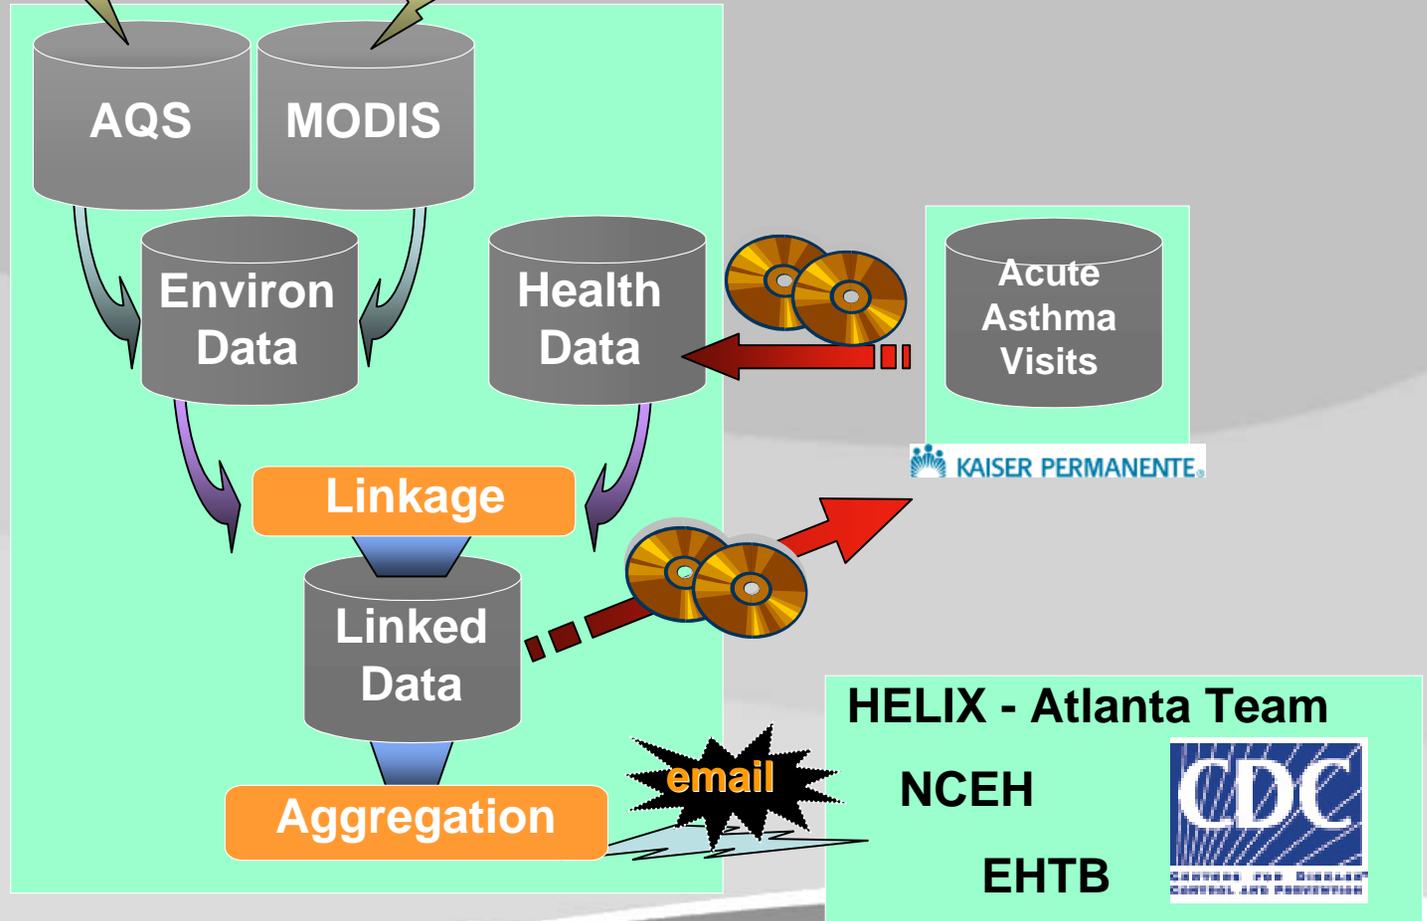

Data Linkage

EPA

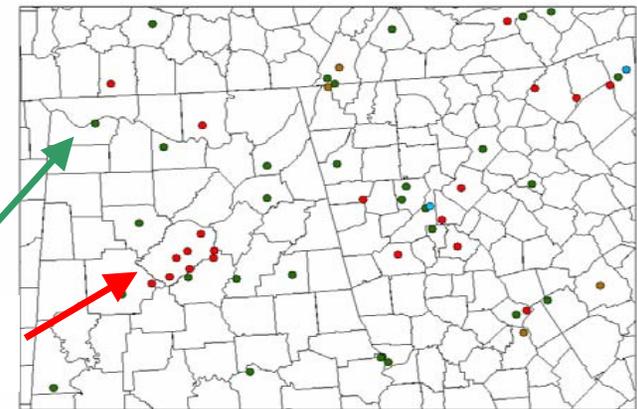

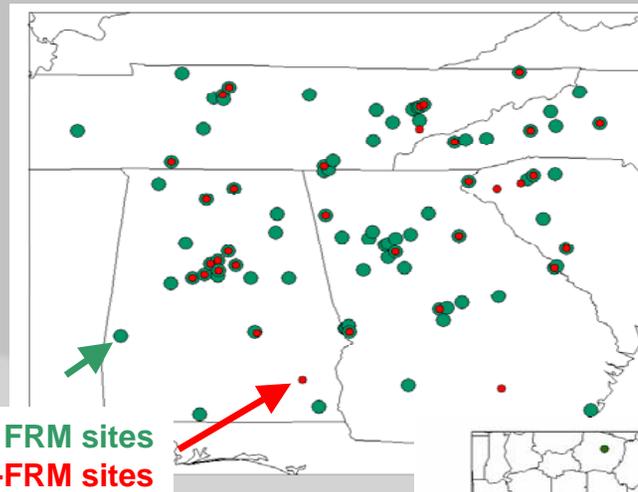

NASA

Sources of PM_{2.5} data: EPA AQS

EPA Air Quality System (AQS) ground measurements

- National network of air pollution monitors
- Concentrated in urban areas, fewer monitors in rural areas
- Time intervals range from 1 hr to 6 days (daily meas. every 6th day)
- Three monitor types:
 - Federal Reference Method (FRM)
 - Continuous
 - Speciation
- FRM is EPA-accepted standard method; processing time 4-6 weeks

Legend

- Frequency=1hr
- Frequency=1day
- Frequency=3days
- Frequency=6days

EPA AQS PM_{2.5} Reporting Monitors
on Jan 10, 2004

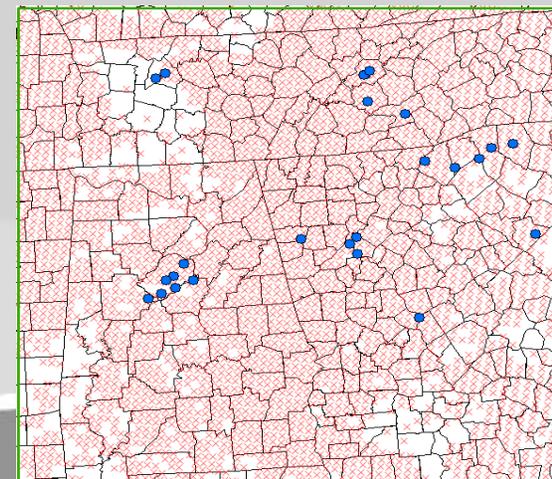

Sources of PM_{2.5} data: MODIS

MODIS Aerosol Optical Depth (AOD)

- AOD is a measure of the total particulate in the atmosphere
- If atmosphere is well mixed, AOD is a good indicator of surface PM_{2.5}
- Enhanced Spatial Coverage
- Provided on a 10x10 km grid
- Available twice per day
(Terra ~10:30 AM, Aqua ~1:30 PM)
- Clear-sky coverage only
- Available since spring 2000

MODIS

AQS

June 25, 2003

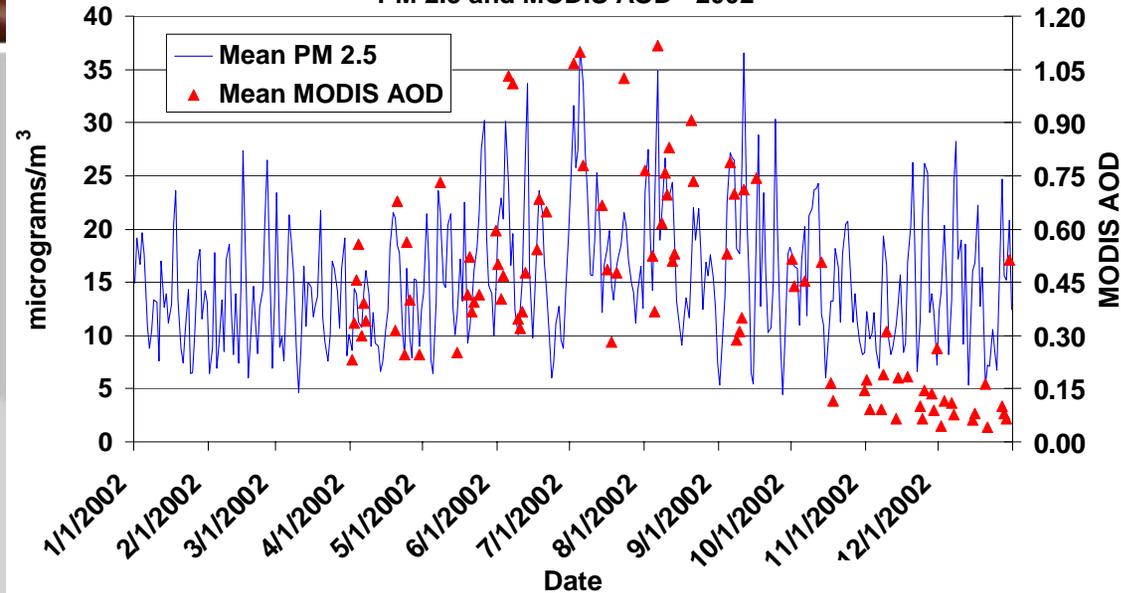

Estimating PM_{2.5} from MODIS data

- For 2002-2003, obtain MODIS AOD and EPA AQS PM_{2.5} data
- Extract AOD data for 5 AQS site locations
- Calculate daily averages from hourly AQS PM_{2.5} data
- Using daily PM_{2.5} averages from all 5 Atlanta AQS sites, determine statistical regression equations between PM_{2.5} and MODIS AOD
- Apply regression equations to estimate PM_{2.5} for each 10 km grid cell across region

MODIS AOD - PM_{2.5} Relationship

PM 2.5 and MODIS AOD - 2002

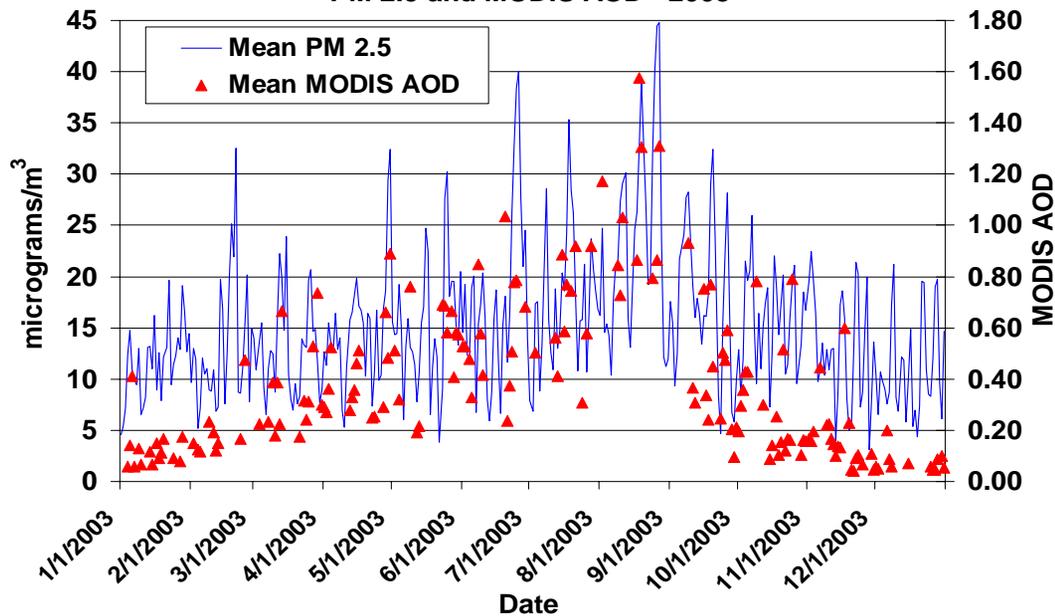

- Daily 5-site means of observed PM_{2.5} and MODIS AOD
- MODIS data not available every day due to cloud cover
- MODIS AOD follows seasonal patterns of PM_{2.5} but not the day-to-day variability in fall and winter

2002

2003

PM 2.5 and MODIS AOD - 2003

PM 2.5 – MODIS AOD Correlations

April - September

MODIS-Terra MODIS-Aqua

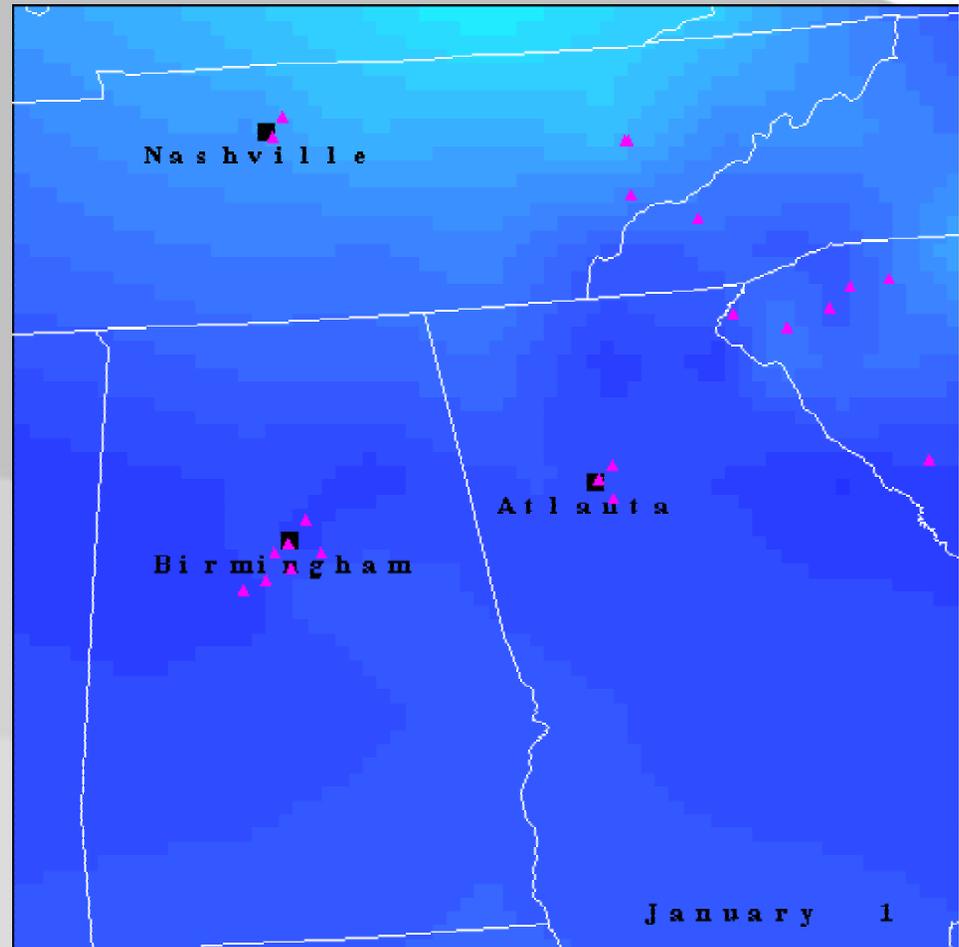

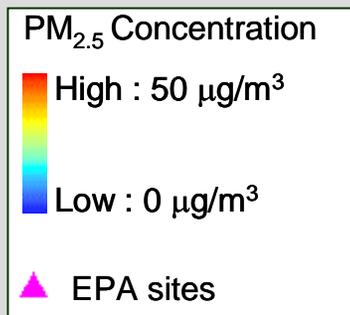

2000 -->	0.579	
2001 -->	0.643	
2002 -->	0.559	0.401
2003 -->	0.661	0.727

- Correlations between PM_{2.5} and MODIS AOD are generally high (> 0.55) for the warm season.
- The lower correlation for MODIS-Aqua in 2002 is for July-September only.

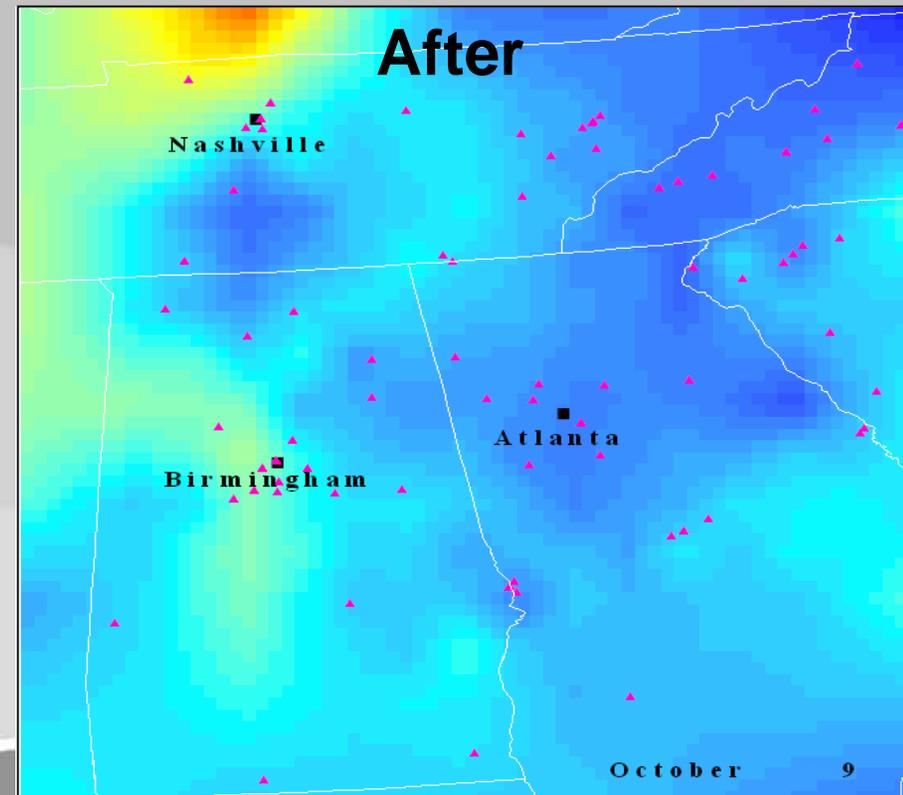

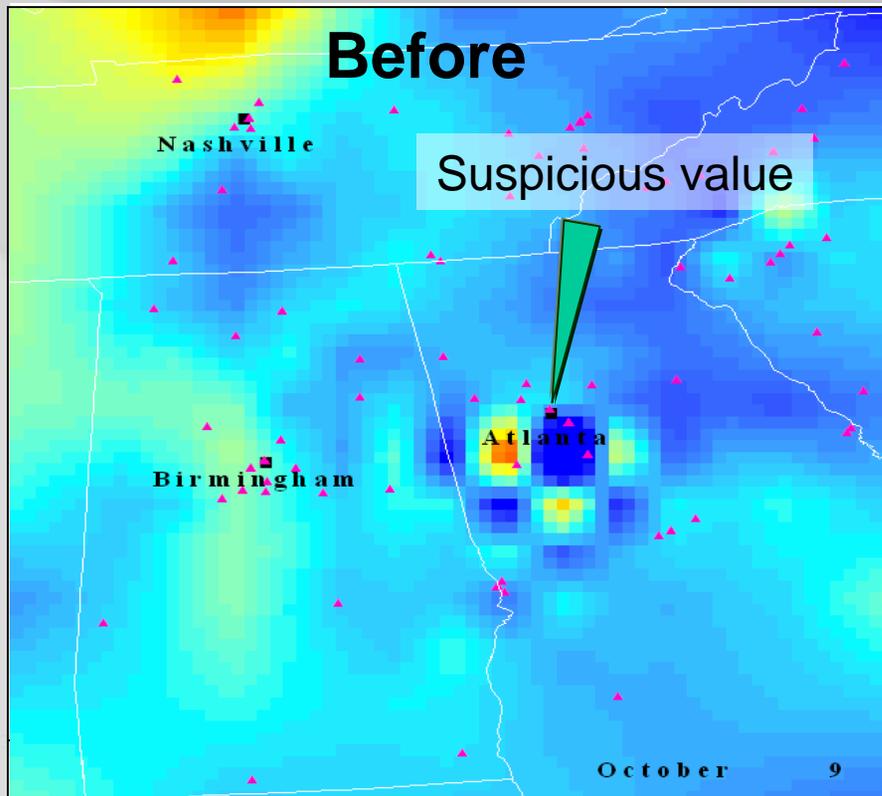

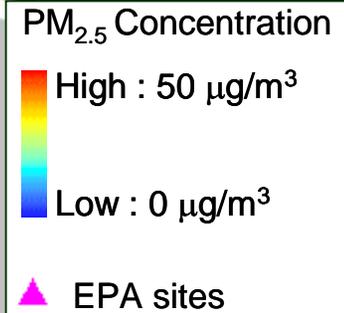

PM_{2.5} Exposure Assessment- Spatial Surfacing

- 1st degree recursive B-spline in x- and y-directions
- Inverse Distance Weighted (IDW)
- Daily surfaces created on a 10x10 km grid
- Variable number of measurements available each day

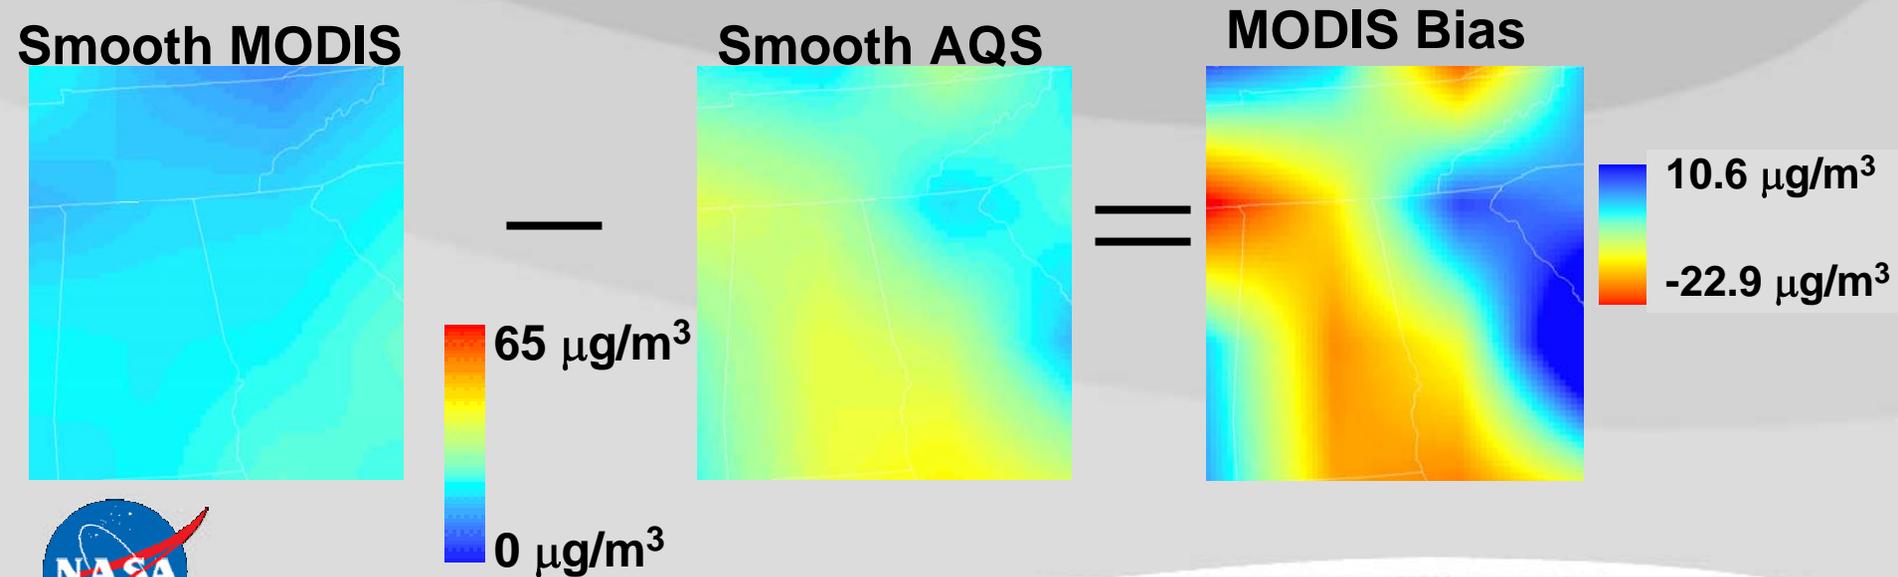

Quality Control Procedure for AQS PM_{2.5} data

- Eliminates anomalous measurements based on a non-parametric rank-order spatial analysis
- Applied to all daily AQS PM_{2.5} measurements before spatial surfaces are built

MODIS PM_{2.5} Bias Adjustment

- Assumption: AQS measurements are unbiased relative to the local mean, but MODIS PM_{2.5} estimates may have biases.
- Procedure:
 1. Use a two-step B-spline algorithm to create highly smoothed versions of the MODIS and AQS PM_{2.5} daily surface
 2. Compute the 'Bias' as the difference between the smoothed fields
 3. Subtract the bias from the MODIS PM_{2.5} daily surface to give the 'bias-corrected' MODIS daily surface

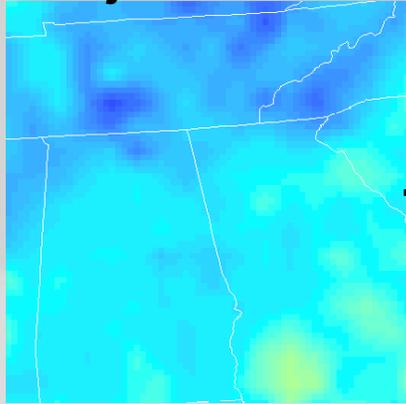

Merging MODIS and AQS PM_{2.5} Data

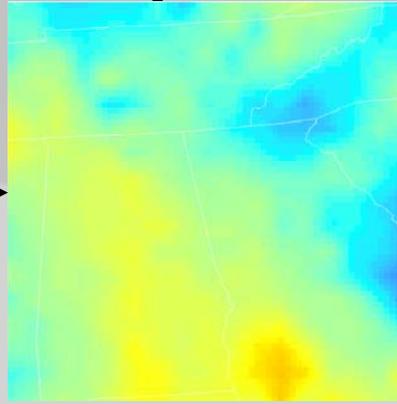

- MODIS and AQS data have been merged to produce final PM_{2.5} surfaces.

B-Spline Surfacing

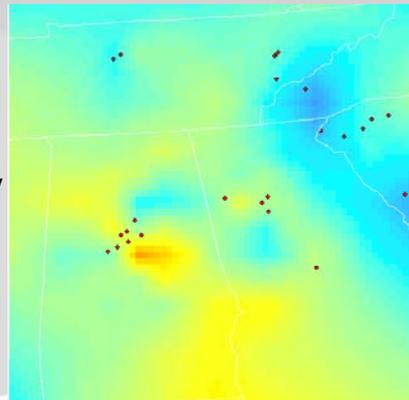

Unadjusted MODIS

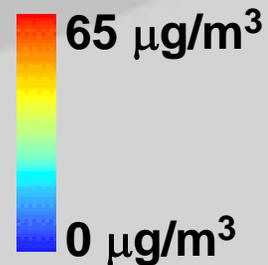

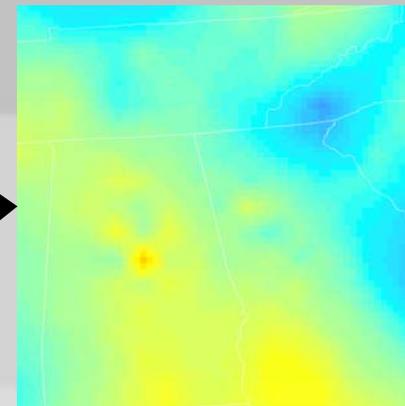

Bias-adjusted MODIS

AQS only

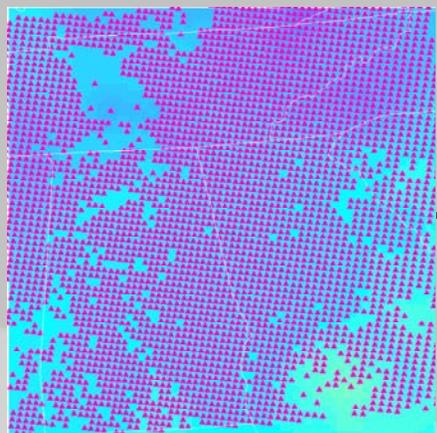

Merged

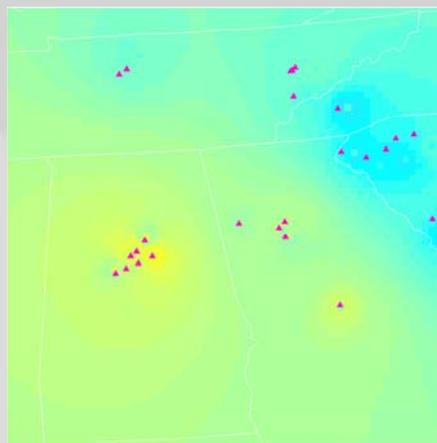

Merging MODIS and AQS PM_{2.5} Data

IDW Surfacing

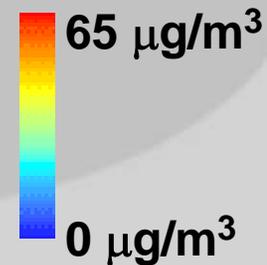

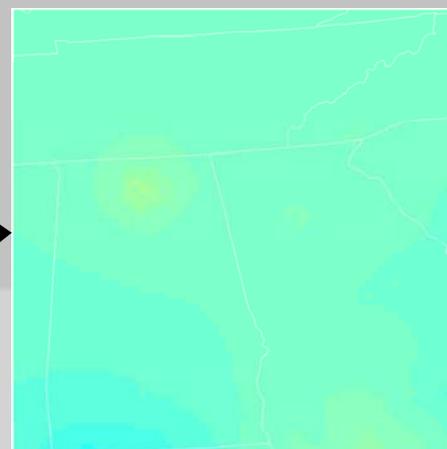

MODIS Only

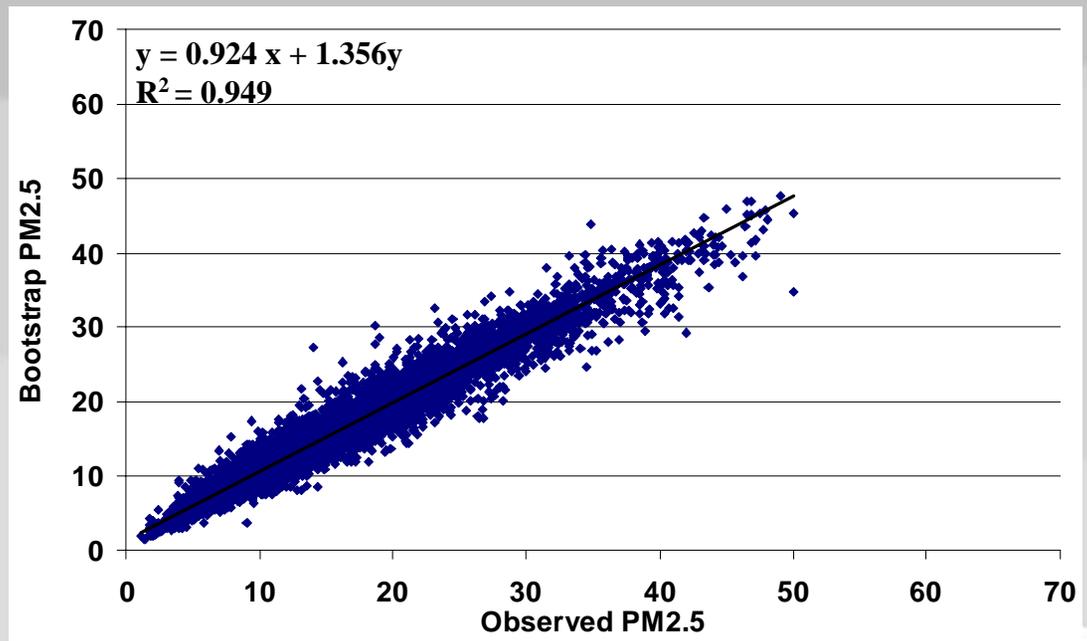

AQS only

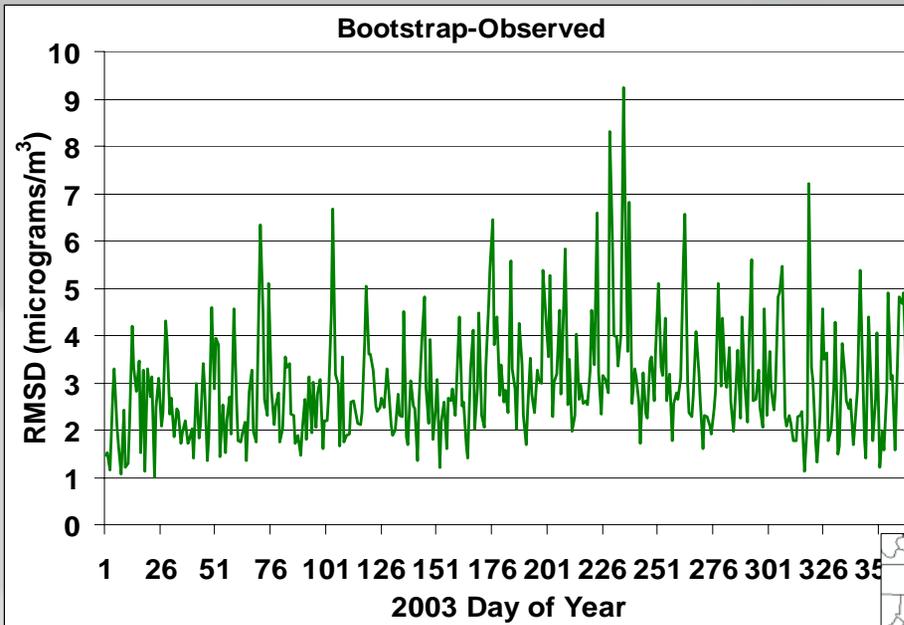

Merged

- a.k.a. 'bootstrapping' or 'omit-one' analysis
- Objective: Estimate errors associated with daily spatial surfaces
- Procedure:
 1. Omitting one observation, create surface using N-1 observations
 2. Compare value of surface at location of omitted observation with the observed value
 3. Repeat for all observations
 4. Calculate error statistics by day or site

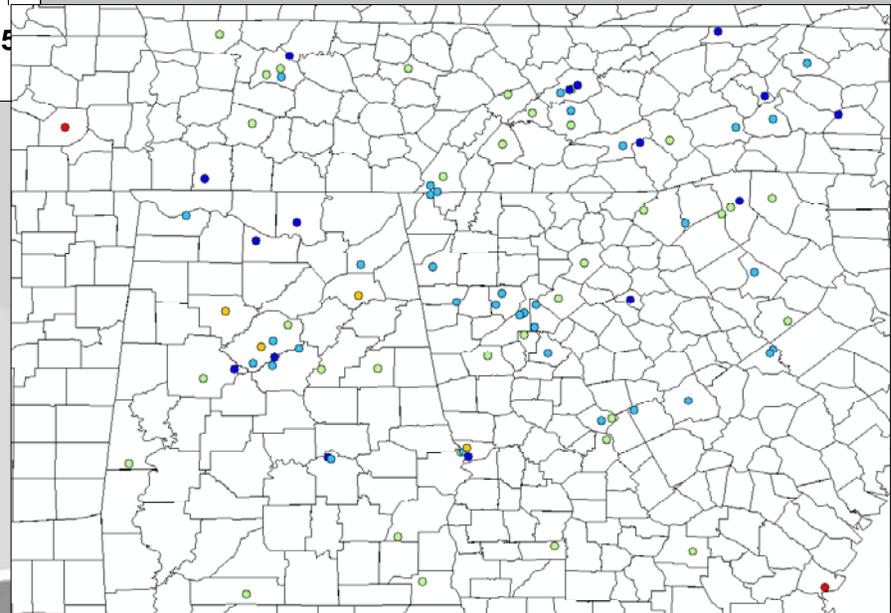

Cross-Validation Error Statistics

Time Series

RMSD = $2.7 \mu\text{g}/\text{m}^3$

RMSD by Site

Surfacing Methods Comparison

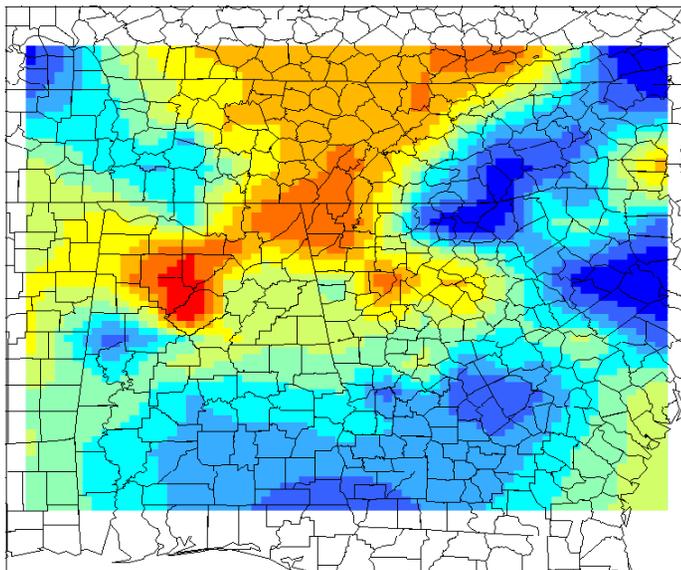

Surfacing Technique and Data Source	RMSD (All Days)	RMSD (Warm Season (Days 91-273))
Bspline, AQS only, no QC	3.302	3.556
Bspline, AQS only, with QC	2.927	3.164
IDW, AQS only	2.450	2.686
B-Spline, merged AQS/MODIS	N/A	2.756
IDW, merged AQS/MODIS	N/A	1.613

Surfacing Technique and Data Source	Improvement
Bspline: QC vs. No QC	12 %
Bspline: AQS only vs. merged AQS/MODIS	16 %
IDW: AQS only vs. merged AQS/MODIS	40 %

*Simulated Data Set. F=female, M=male, A=adult, C=child.

- **Proven the feasibility of linking environmental data (MODIS PM_{2.5} estimates and AQS) with health data (asthma)**
- **Developed algorithms for QC, bias removal, merging MODIS and AQS PM_{2.5} data, and others...**
- **Negotiated a Business Associate Agreement with a health care provider to enable sharing of Protected Health Information**
